

AngularJS

Call: 01628 810 196 | jessica@dynamix-training.co.uk | www.dynamix-training.co.uk

AngularJS is a structural framework for dynamic web apps. It lets you use HTML as your template language and lets you extend HTML's syntax to express your application's components clearly and succinctly. AngularJS's data binding and dependency injection eliminates much of the code you would otherwise have to write.

The course is a two-day course on Angular, the Javascript framework from Google.

This course covers version 1 of the Angular framework, and shows you how to build structured, testable applications with less code.

The course runs from 9.30 am to approximately 4.30 pm.

Duration: 2 day.

Javascript review

Fundamentals: arrays, objects, variables, functions
Scope: closure, hoisting, the module pattern, IIFEs, using bind and 'this'

Angular introduction

Modules
Controllers
Repeaters
Filters

Angular development

Routing
Components
Binding
Services
Working with forms

Data

Working with data
The HTTP services

Testing

Writing tests in Jasmine

Best practice

"A highly professional company run by knowledgeable, friendly people"
